[API Source: api-nba-v1.p.rapidapi.com]
    ↓
[Notebook: rest_nbaapi_API_Extract_Load_Raw.ipynb]
   - Calls player stats by team using requests
   - Filters for season 2021–2025
   - Selects top 5 players by win shares
   - Appends team + season data into one DataFrame
      ↓
[Transform]
   - Standardizes columns: player, team, season, win_shares, PER, VORP, etc.
   - Adds filters for specific seasons
      ↓
[Load]
   - Connects to AWS RDS PostgreSQL using SQLAlchemy
   - Loads to table: **sql_project.nba_api_player_stats**
      ↓
[Trigger]
   - GitHub Actions: `rest_nbaapi_api_pipeline.yml`
   - Scheduled weekly or on manual dispatch
